Develop Odoo (v15 community) module as follows:

- Create a model with the name "copartners" as follows:
  - Views: Kanban, Form and List
  - Fields:
    - Name*
    - Gender
    - Country
    - Joining Date
    - Tags
    - Customers (where you can select multiple values from odoo default customers model)
    - Company* (where you can select one value from Odoo default Companies official model).
    - Notes (a long text field in a new tab named Notes).
    - Comments (a short text field in a new tab named Comments).
- Your new module should have a "Messages and logger that tracks any change in the previous fields" in the form view.

  *Hide the create button from the form view using javascript.
- Generate a PDF report for your model that contains all the previous fields excluding the message logger.
